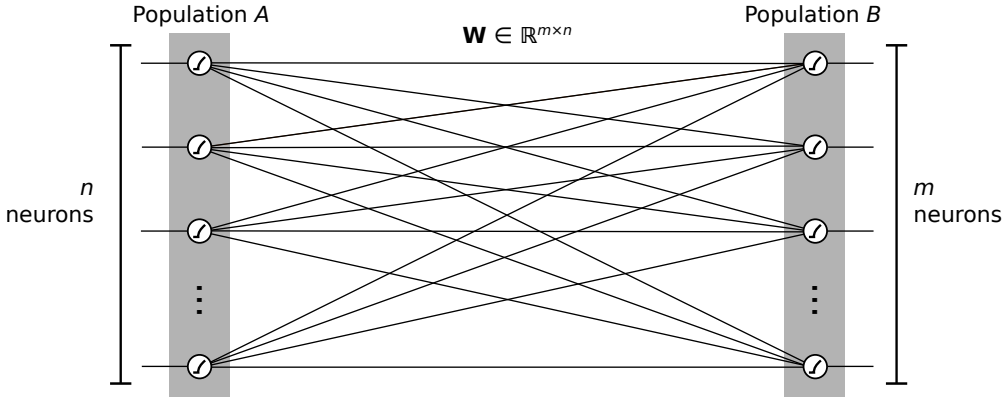
UNIVERSITY OF WATERLOO | FACULTY OF ENGINEERING

NEF Principle 2: Transformation

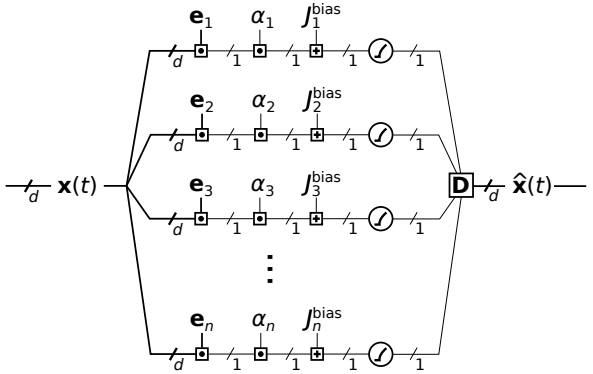


NEF Principle 2 – Transformation

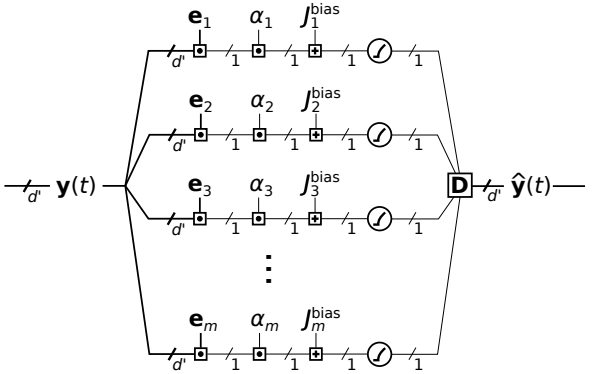
Connections between populations describe *transformations* of neural representations.
Transformations are functions of the variables represented by neural populations.

A Tale of Two Populations (I)

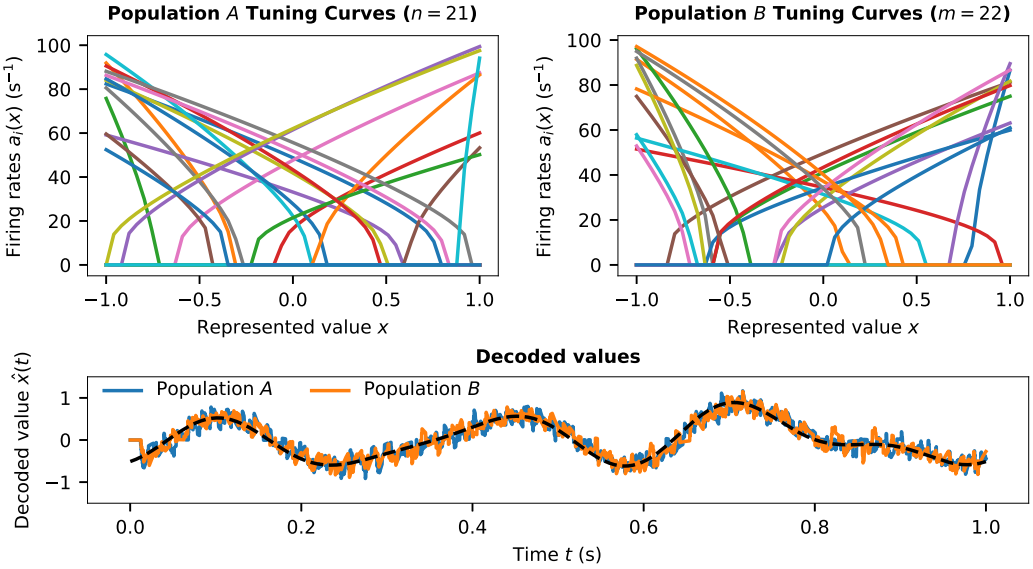
Population A



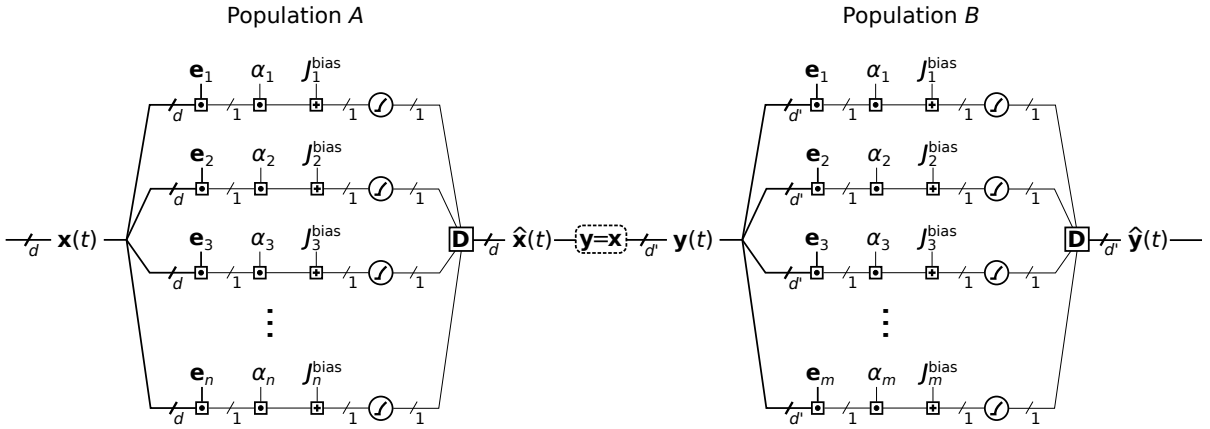
Population B



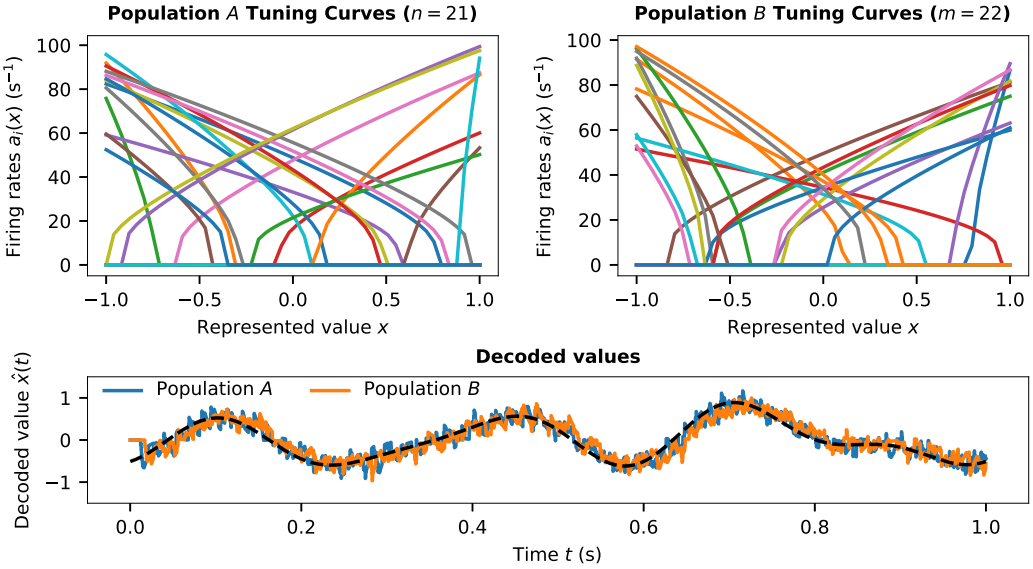
Communication Channel Experiment: Same input signal



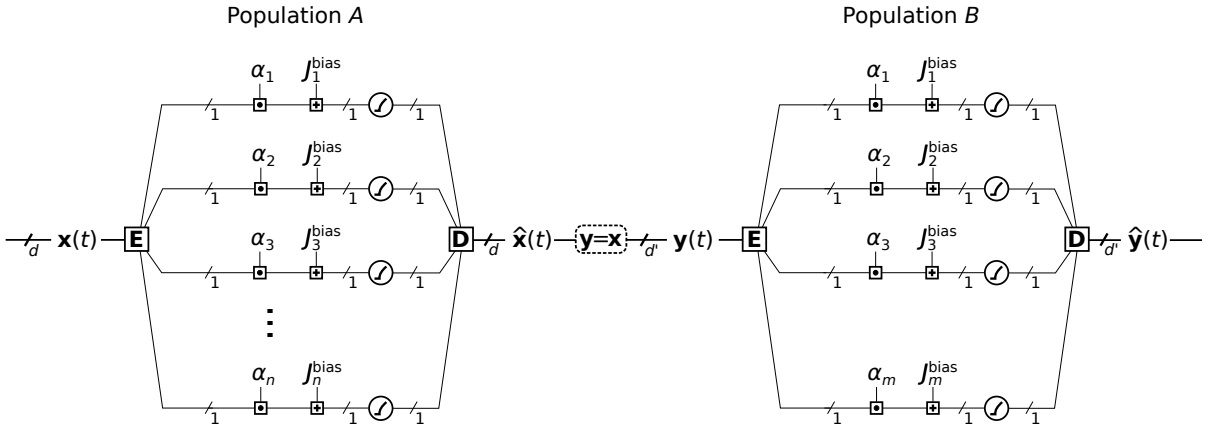
A Tale of Two Populations (II)



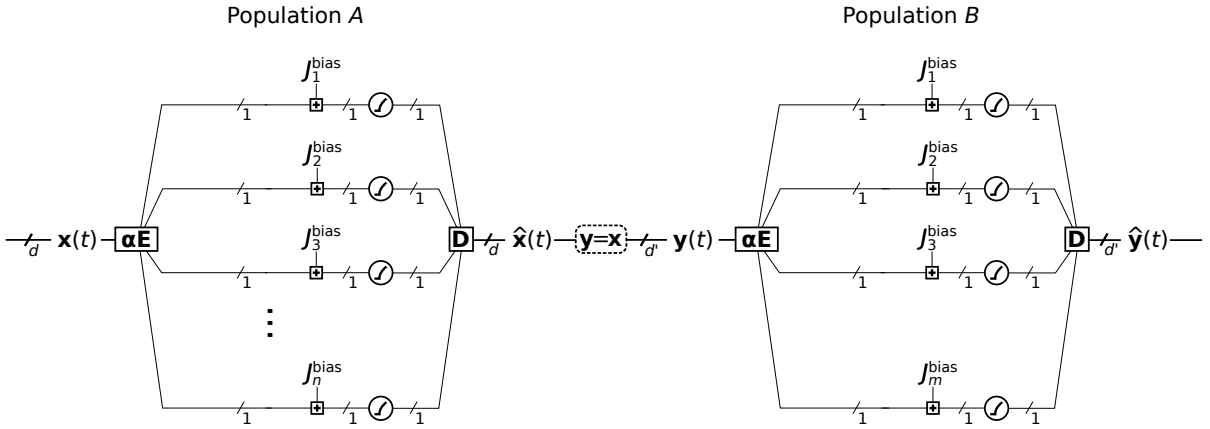
Communication Channel Experiment: Populations in series



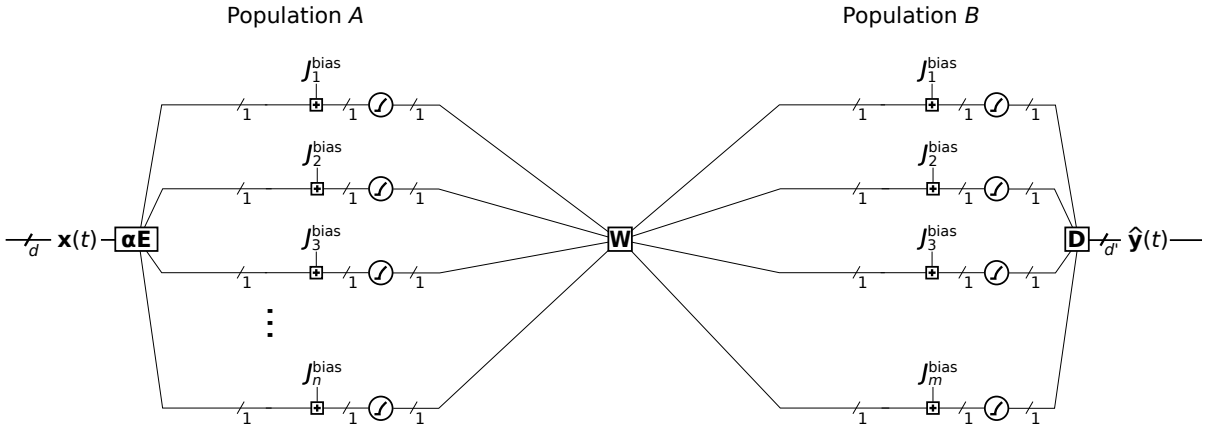
Computing Synaptic Weights: Step 1 – Encoding Matrix



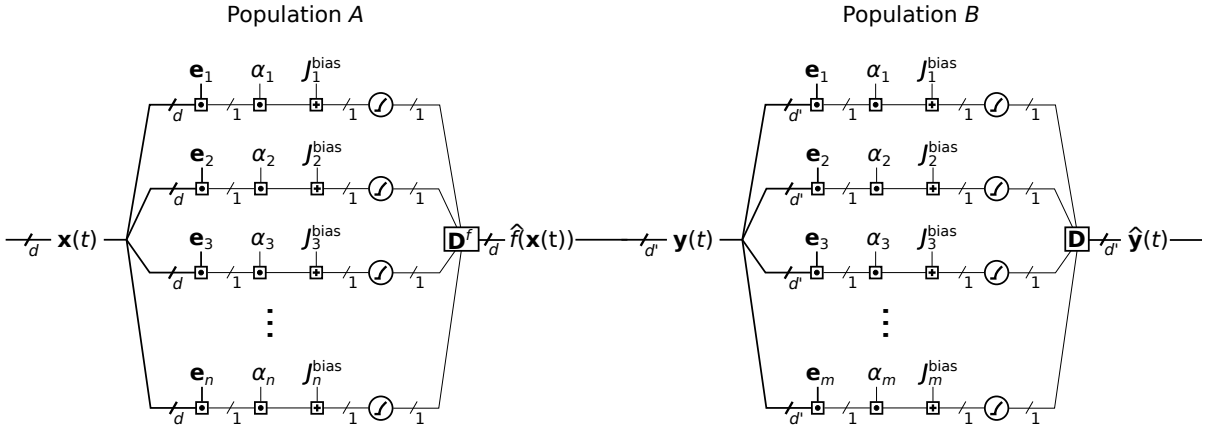
Computing Synaptic Weights: Step 2 – Scaled Encoding Matrix



Computing Synaptic Weights: Step 3 – $\mathbf{W} = \mathbf{ED}$

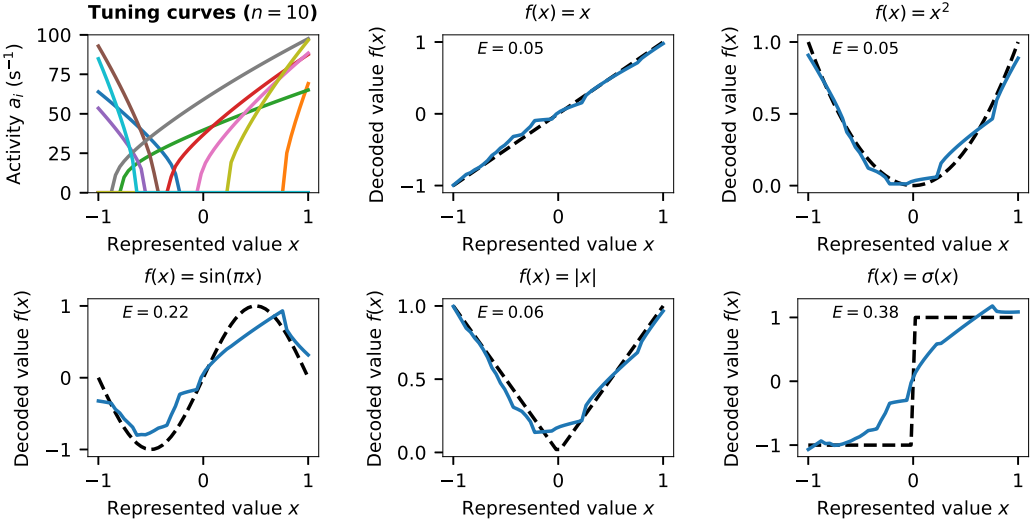


Computing Functions

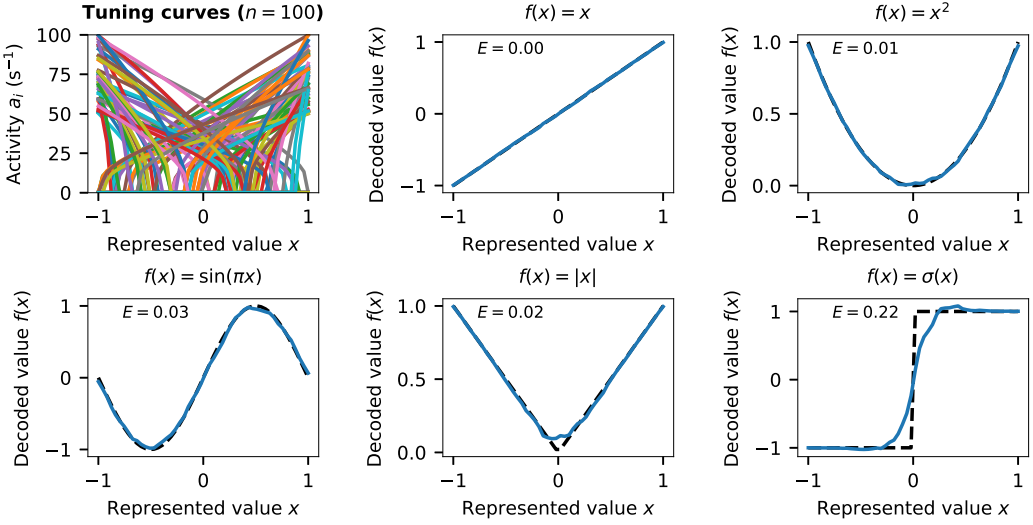


Function Decoder $\mathbf{D}^f = \left((\mathbf{A}\mathbf{A}^\mathsf{T} + N\sigma^2\mathbf{I})\mathbf{A}\mathbf{Y}^\mathsf{T}\right)^\mathsf{T}$, where $\left(\mathbf{Y}\right)_{ik} = \left(f(\mathbf{x}_k)\right)_i$

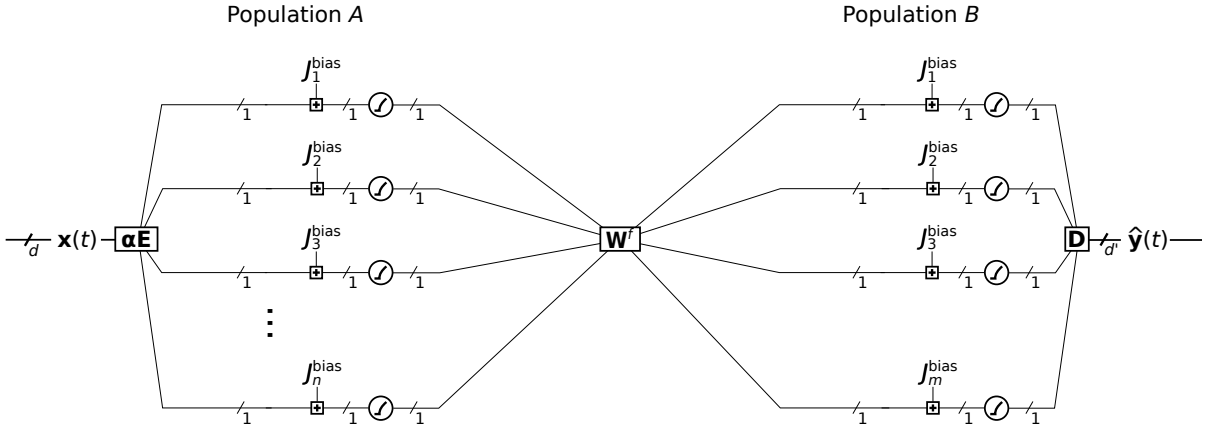
Decoding Functions – Using a Few Neurons



Decoding Functions – Using More Neurons

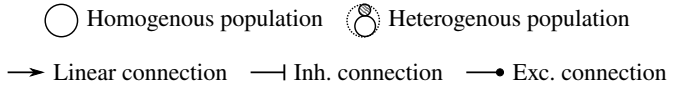


Computing Functions – Weight Matrix



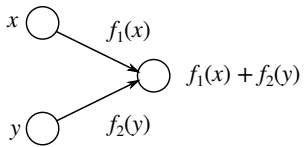
$$\mathbf{W}^f = \mathbf{E}\mathbf{D}^f$$

Computing Multivariate Functions



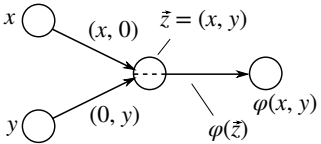
Linear Superposition

$W^{f_1}\mathbf{a}_1(\mathbf{x}) + W^{f_2}\mathbf{a}_2(\mathbf{x})$



Nonlinear Functions

Multi-dimensional $\mathbf{z}$



(Dendritic Computation)

Exploit dendritic nonlinearity
