Optional:
Chris Eliasmith *How to Build a Brain*, Oxford University Press, 2013.

Coursework (SYDE 556 & SYDE 750)

Five Assignments

- 20%, 20%, 15%, 15%, 30%, respectively
- Roughly two weeks for each assignment
- Everyone must write their own code, generate their own graphs, and write their own answers.

Final Project (SYDE 750 only)

- Build a model of some neural system.
- Replicable science: report everything needed to recreate your model and analysis
- 25% of grade (assignments are rescaled to 75%)
- Have your project proposal approved via email by Oct 27

Coursework (SYDE 750 only)

Class Participation in the Seminar (SYDE 750 only; optional for SYDE 556)

- General discussion about Neuroscience, cognitive science, AI, etc.
- Special interest: replicable science and computational modelling
- SYDE 750 students must attend the seminar (Tuesday, 9:00-9:50).
- No marks for this part of the course.

Homework

- **Get the textbook, read the first chapter**
  ("Neural Engineering", Chris Eliasmith and Charles Anderson, 2003)

- **Be able to run `jupyter lab` or (`jupyter notebook`) with Python 3**
  Install `numpy`, `scipy`, and `matplotlib`. You may want to use Anaconda, which ships with these packets preinstalled.
